Description

Robert Half is seeking a Senior Software Engineer for a team focused on the development of software used in Software as a Service (SaaS) applications. You will analyze, design, program, debug, and modify software enhancements. The software engineer will write code, complete programming, and perform testing and debugging of applications using common programming languages. You will also complete documentation and procedures for installation and maintenance. May define system requirements and/or necessary modifications with other users. Skilled in logical data modeling. Experience in object-oriented design, coding, performance tuning, and unit testing. You can expect this role to be about 75% development and 25% system management and support. The ideal candidate will have strong communication and team building skills and be able to participate in software design discussions and guide the architecture of the solution based on good object oriented design concepts, and both industry standard patterns and Microsoft best practices.

How you will make an impact

- Translates business requirements to high-level project estimates and conceptual solution architecture.

- Comfortable creating and managing web services.

- According to business requirements, develops, modifies, and implements Software as a Service (SaaS) hosted applications.

- Experience utilizing open-source languages to develop software.

- Strong understanding of scripting library tools.

- Relational Database knowledge.

Requirements

- Complete such other duties as may be assigned by management

- Experience in JavaScript/TypeScript, React, Nodejs, Nextjs

- Works on the testing process through test review and analysis, test witnessing and certification of software

- Object oriented unit testing, performance tuning, coding, and design

- Reviews technical requirements to ensure compliance with business requirements

- Accomplishes proper unit testing and software code written (including automated unit testing)

- Familiar with appropriate standards and techniques used during the Software Development Life Cycle process (SDLC, security) and applies them appropriately

- Logical data modeling design and implementation skills

- Comfortable working on multiple tasks simultaneously with various team members and/or other groups both internally and externally

- Must have excellent time management skills

- Research, extraction and entry of complex data
